

Email Encryption

Overview: These instructions describe how to send an encrypted message from your UDSF email account. **Note: Messages can only be encrypted when sending to an email address outside of UDSF.** The encryption process does not work when sending a message from your UDS account to another UDS email account.

Step 1: Encrypting an email.

You are able to send an encrypted email from your company email address to any recipient outside your organization. From your UDSF Outlook, create a message you would like to encrypt. To encrypt the email message, simply type the word **encrypt** in the subject line of the email before sending.

Note: You do not put brackets around encrypt.

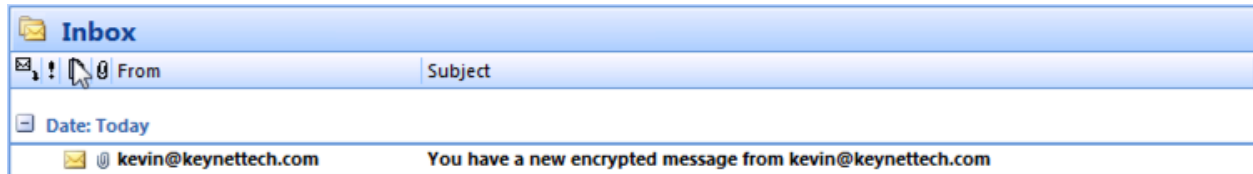

Rules have been setup for encryption based on certain criteria. For instance, if the email contains numbers in the pattern of a social security number nnn-nn-nnnn the email will automatically be encrypted.

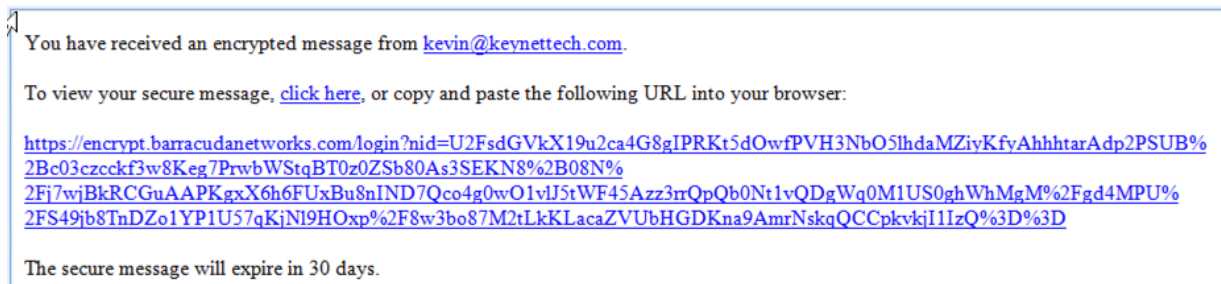

Step 2: **Receiving an encrypted email.**

When the recipient receives an encryption message, the subject of the message will say they have received an encrypted message, and will show the sender's email address. This email contains instructions on how to access the encrypted email.

Click on the link in the email and it will take you to the Barracuda encrypted email website.

Step 3: **Logging into the Barracuda Message Center.**

Once you click or paste the URL into your browser, a Barracuda Networks Message Center page will appear. ***Your username will always be your email and your password will be what you create.***

1. The first time this system is used, you will be asked to create a password.
2. The password can be anything you want, but must meet these password strength requirements:
 1. Include at least one special character (For example: @, #, \$, %, &, etc.).
 2. Be at least 8 characters long.
3. Once you have chosen a password that meets all the specified criteria, click **Done**
4. You will then be taken to the **Encrypted Messages** page.

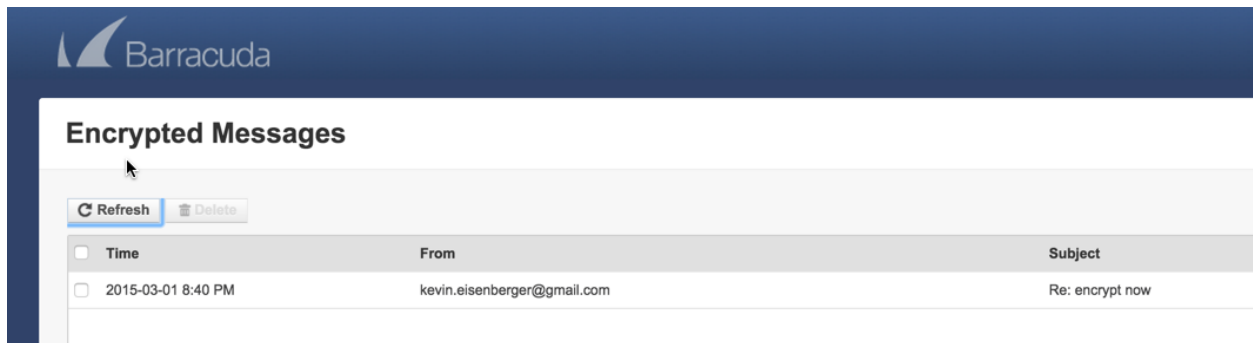

If you forget your password, click on the **Forgot your password** link. The system will send you an email to reset your password. Click on the link in the email to be directed to the Barracuda Networks Message Center, which will ask for a new password and confirmation.

You can also login by going to the URL <https://encrypt.barracudanetworks.com> and use your email address and password you previously setup.

Step 4: Retrieving your secure Email Message

The Barracuda Message Center provides you with a web interface that looks much like Microsoft Outlook. You can view a list of your encrypted messages, click on one to view the contents, delete one or more of them or download the message(s) to your local system.

Step 5: Viewing Messages

1. Click on a message to view the contents.
2. The encrypted message will open displaying all information.
3. From the message window you can use buttons on the message bar
 - a. Reply to
 - b. Reply All
 - c. Print
 - d. Delete
 - e. Download

Attachments can be downloaded individually by clicking on them.

Step 6: **Reply to Messages**

If you reply to your encrypted message, the contents of your reply will also be encrypted. Once you click **Reply**, you can upload files and send them securely back to the sender as part of the reply email.

To do this:

Click **Browse** and locate the files you wish to add

Or

Add (to include an attachment in the reply email).

When finished, click **Send**. This will cause your reply message to be encrypted before returning to the sender. You can also click **Reply All** to send your encrypted response to all other recipients of the message.

Step 7: **Saving Message Content**

Barracuda will store encrypted messages for 30 days. After that they are permanently deleted and cannot be retrieved. If you want to save the original email, the entire message (including attachments) can be saved by clicking the **Download** button.

****Note: For HCBS employees, if you need to save an encrypted email related to a participant, the email would need to be saved to the participant's Case Files folder located on the K Drive. The path for those folders is: K:\\HCBS Documents\\Case Files**

Step 8: **Delete multiple messages**

To Delete Encrypted Messages, click the check box next to the message(s), and then click the **Delete** (trash can) icon on the tool bar.

To refresh the message list, click the **Refresh** icon next to the **Delete** icon on the tool bar.

Revision History

Name	Date	Reason for Changes	Version
Erik Lofgren	1/10/11	Initial draft	1.0 draft 1
Erik Lofgren	1/9/23	Review	1.1
Geoff Heller	4/12/23	Included a section on how to download an encrypted message to a shared drive	1.2
